

INTERESTED IN YOUR LOCAL ENVIRONMENT?

IF YOU ARE INTERESTED IN PRACTICAL ENHANCEMENT PROJECTS SUCH AS WOODLAND & WETLAND CREATION, RIVERBANK PLANTING, CONTROL OF INVASIVES OR MONITORING RIVER QUALITY & HABITAT CONDITION OR JUST INTERESTED IN KNOWING MORE ABOUT IT ... READ ON

NATURE RECOVERY - RIVER RESTORATION

An ambitious initiative looking to join up fragmented habitats and increase biodiversity, starting with our precious East Lammermuir burns

We will target several local catchments, assess their condition, and key opportunities to improve natural river functioning, water quality and biodiversity from source to sea

Exploring how **landowners, community & business** can take practical action and scale up enhancements across farms and landscape

CONTACT: MAPPING@SUMMIT-TO-SEA.UK

What if ...

... our uplands formed a **dynamic mosaic** of **heather, bog, scrub, woodland** and **small wetlands**

... **rivers meandered** more freely and developed more naturally

... **riverbank woodland** flourished, shading and cooling the water

... larger areas of **native woodland** joined up and **regenerated naturally**

... habitats **connected** across the landscape through woodland, hedgerows and **wildlife corridors**

... **coastal dunes** and **salt marsh** remained dynamic and resilient under **growing natural pressure**
